Prepare > Tutorials > 30 Days of Code > Day 10: Binary Numbers

Objective

Today, we're working with binary numbers. Check out the [Tutorial](#) tab for learning materials and an instructional video!

Task

Given a base-10 integer, n , convert it to binary (base-2). Then find and print the base-10 integer denoting the maximum number of consecutive 1's in n 's binary representation. When working with different bases, it is common to show the base as a subscript.

Example

$n = 125$
The binary representation of 125₁₀ is 1111101₂. In base 10, there are 5 and 1 consecutive ones in two groups. Print the maximum, 5.

Input Format

A single integer, n .

Constraints

- $1 \leq n \leq 10^6$

Output Format

Print a single base-10 integer that denotes the maximum number of consecutive 1's in the binary representation of n .
